

HOW WE WORK

With 20 years under our belt, we know we're successful because of the way we work.

Our combined onsite and offsite approach is what makes it possible for us to build quality software.

We refer to our model as "bringing outsourcing in." It means that we place a project manager who becomes a member of your team. We believe placing a project manager onsite with your company is an essential element to a successful project. Depending on the details, it may also be beneficial to place additional onsite resources like a business analyst. Beyond this, we provide a team lead and business analyst to manage the development aspect of your project at our offshore development centers in Jordan and Egypt.

During the lifecycle of a new software project, we know how important it is to you to minimize disruption and distraction within your existing operation. This is why your exclusive point of contact during the project is the onsite project manager. This individual is accountable for your entire project, from beginning to end. Their priority with you is to gain a working understanding of the requirements, methods, and goals of your business. With this information, they collaborate with the offsite project manager and business analyst who are then responsible for translating your requirements into a solution according to your needs.

BRINGING Outsourcing In

Bringing outsourcing in means that we place a project manager who becomes a member of your team.

The communication link between the onsite manager and the offsite team is critical.

This is why our project managers and business analysts on both sides work very closely throughout every project.

They have constant contact to ensure that requirements are communicated accurately, questions are answered quickly, and issues are resolved immediately.

WORLD CLASS CUSTOM SOFTWARE DEVELOPMENT

When done right, the benefits of offshoring are numerous.

Initially, we expanded offshore because the talent and resources were much more readily available there. Now, after many years of establishing unified and experienced teams, we are able to offer our clients high-quality, scalable bandwidth and skill sets.

The benefit of our model to clients is that they have access to excellent teams without having to take on the task of assembling and managing individual resources themselves.

Building software in our own offshore development centers also keeps operational costs low without compromising quality or increasing risk.

This translates directly into lower project costs for our clients.

And finally, each project benefits from 24 hour attention. Because of the time difference, there is round-the-clock work being done on every project, whether it's our domestic project managers gathering feedback and requirements from clients, or our offshore teams developing the software.

Doing good business overseas requires more than just international business expertise.

It takes hands-on knowledge of the culture you're infiltrating. It takes time and patience to develop trust and a good reputation within a foreign community. And, it takes someone who knows the foreign business laws and regulations and can keep the operation up to date.

At Integrant, we've experienced all of these things and have gathered invaluable knowledge in our fifteen years of offshore business.

WHY OFFSHORE?

Access to talent pool and resources

Scalable bandwidth and skill sets

Eliminate recruiting and training time and costs

Lower project costs
